

Dr. Baulieu, who created the abortion pill, passed away on 30 May, 2025 at age 98.

Today, nearly TWO-THIRDS of all abortions are committed with Chemical Abortion Pills, and the Abortion Lobby wants everyone to believe that having an abortion is no different than popping an aspirin for a headache!

The truth, of course, is anything but, as:

Chemical Abortion Pills now starve over 600,000 preborn babies to death in their own mothers' wombs every year by the Abortion Industry's own estimations;

At least 38 women (that we know of) have died from complications from Chemical Abortion Pills;

Women with certain blood types can become infertile if they're not immediately seen and treated by a doctor; and

40+ TONS of chemically tainted medical waste (including toxic chemicals and fetal human remains) are flushed into U.S. water systems due to Chemical Abortion Pills.

And that doesn't even scratch the surface of how dangerous these pills are!

In fact, a recent groundbreaking study conducted by the Ethics and Public Policy Center found that:

Nearly 1 in 9 of women experience sepsis, infection, hemorrhaging, or another serious adverse event within 45 days of taking the Chemical Abortion Pill;

The real-world rate of serious, adverse events following Chemical Abortions is at least 22 times as high as the summary figure of "less than 0.5 percent" in clinical trials reported on the drug label; and

The 10 "clinical trials" originally used by the manufacturer and the FDA to approve these deadly pills – showing less than 0.5 percent of whom reportedly experienced serious adverse reactions – actually came from Planned Parenthood!
